INTRODUCTION

After the June decrease of the ECB benchmark interest rates and decrease of bank lending rates, lending in the euro area compared to the previous month did not change significantly (Graphs 01 and 02). The headline inflation in the euro area in July did not change significantly compared to the previous two months (Graph 03). Moderate growth of consumer prices also continued in Bosnia and Herzegovina (Graph 04). Real retail trade index recorded the lowest annual growth rate since the beginning of 2021 (Graph 05). Industrial output was declining in the first seven months, mainly due to a significant decline of production in mining (Graph 06). A low level of economic activities of the main BH foreign trade partners determined the export value (Graph 07). A slow annual growth of the value of commodity exports resulted from increased exports of the most significant groups of chemical products and machines and appliances (Graph 08). On the other hand, annual growth of the value of commodity imports resulted from the increased value of all the most important import product groups (Graph 09). Due to imports growth, and also a significant growth of income from tourism, indirect tax revenues increased significantly during July (Graph 10). Liabilities based on foreign debt, which is financed from indirect taxes were serviced regularly (Graph 11).

Due to a high demand for loans in July, a significant credit growth rate was registered (Graph G12). On the other hand, several month long growth of the total bank deposits was continued, being in July almost entirely determined by the growth of deposits of non-financial companies (Graph 13). In July, monthly increase of liabilities of the general government with commercial banks was recorded (Graph 14). After several month lasting stagnation, bank foreign liabilities in June increased considerably, with roughly the same level of bank foreign liabilities maintained in July (Graph 15).

Resulting from the negative purchase and sale balance, the foreign exchange reserves decreased at the monthly level, but, due to a stronger percentual decrease of monetary liabilities in relation to the foreign exchange reserve trend, the ratio of the currency board coverage increased (Graph 16). According to the recorded trends in reserve accounts with the CBBH, and the growth of the base for required reserve calculation, the required reserve implicit rate decreased in July end (Graph 17).

The reserve money decrease and monetary aggregate growth brought about a slight growth of monetary multipliers (Graph 18).

Although the ECB, in the beginning of June, and then in September 2024, relaxed its restrictive monetary policy, by decreasing its key interest rates by 25 bp each time, the financing terms in the euro area are expected to remain tightened. On the other hand, the FED kept its key interest rates unchanged until September 2024, when the benchmark rates were reduced by 50 basis points. The FED benchmark rate is expected to decrease once again by a half of percentage until the end of the year, and then by additional percentage point during 2025.

After the ECB decreased interest rates for the first time in June, the credit growth in the euro area remained weak due to a much lower demand. Lending to non-financial companies in July increased at the rate of 0.6%, which is a slight decrease compared to June, while the growth of loans to households slightly increased to 0.5%. Lending rates in the euro area continued to decline, amounting to 4.95% on the average in the end of July (non-financial companies), i.e. 7.77% (consumer household loans). Under the effect of the still high deposit interest rates, growth of deposits in the euro area banks continued.

The annual inflation rate in the euro area in July 2024 amounted to 2.6%, which is lower by 2.7pp compared to the price growth rate from the same month of the previous year. The core inflation in the euro area recorded the identical rate (2.9%) as in the previous two months, staying higher compared to the overall price growth rate. The largest contribution to the overall price growth in the euro area was that of the category of services (1.8%), accounting for 44.9% of household spending in the euro area. In July, the annual growth rate of prices of services was 4.0%, exceeding the rates of headline and core inflation by 1.4 pp and 1.1pp, respectively. Energy prices recorded the highest annual growth in July since April of previous year, which can be mainly explained by the base effect. Food prices recorded the annual growth of 1.4%, which is the lowest growth rate of food prices since July 2021.

G04: Annual Changes of Average Consumer Prices in BH, July End

A moderate growth of average consumer prices was continued in July, with the recorded annual price growth of 1.8%. Core inflation was 3.8%, which is still above the headline inflation rate, but it also represents the lowest rate of core inflation since the beginning of the year. The highest annual price growth, in July, was recorded for the category of services of restaurants and hotels (7.3%), alcohol beverages and tobacco (4.6%) and other products and services (4.3%). The category of utility costs recorded the highest price growth rate since the beginning of the year, mainly resulting from base effect. The food prices saw annual growth of 0.2%, which is lower by 8.5 pp compared to the growth rate from the same month of the previous year. Inflation of services in July recorded the annual rate of 4.5%, which is higher by 2.7 pp compared to the headline inflation rate.

G05: Real Retail Trade Index

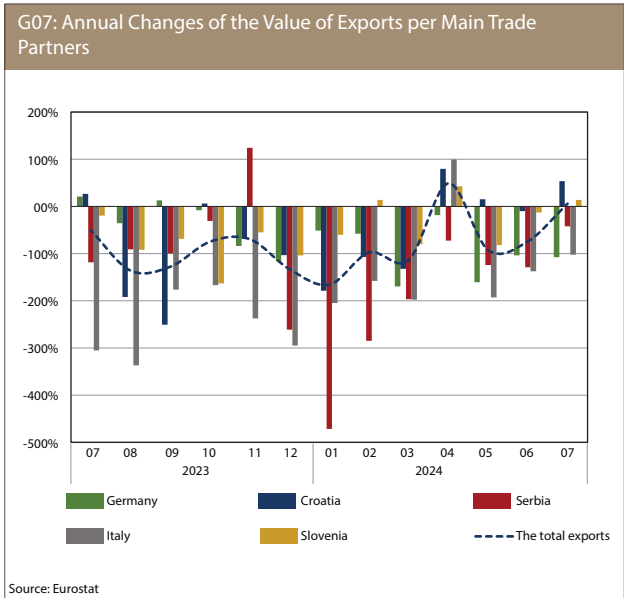

In July 2024, real retail trade index recorded the lowest annual growth rate since the beginning of 2021 (4.3%). The rate of real growth of retail trade index in July was lower by even 12.6 pp compared to the annual growth rate from the same month of the previous year, and lower by 3.5 pp compared to the average growth rate recorded for entire 2023. The highest annual growth was seen for the activities of retail trade in information-communication equipment (31.8%), retail trade outside shops, stalls and markets (22.7%) and retail trade in motor fuels (9.4%) On the other hand, the strongest annual decline in July was seen in retail trade in books, newspapers, music and video recordings (14.8%).

G06: Annual Change of Industrial Output by Areas, Source Indices

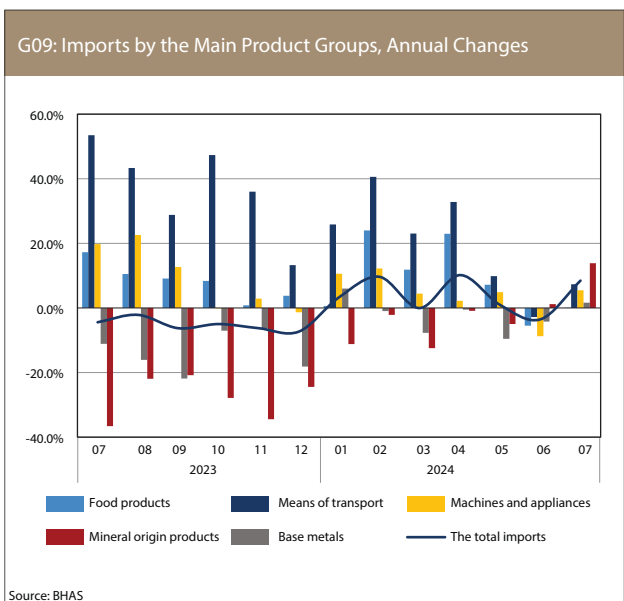

Industrial output, in July 2024, recorded annual decline of 1.4% resulting from a decline of industrial output in activities of mining (10.1%) and manufacturing industry (1.8%). On the other hand, production and supply of electric energy and gas recorded annual growth of 3.3% in July. Within manufacturing industry, almost all the most significant areas recorded annual decline, except for the production of finished metal products, which recorded annual increase of 9.4%. In the first seven months of the current year, compared to the same period of the previous year, industrial output declined by 5.1%.

Slight annual growth of the value of commodity exports from BH is a result of decreased demand for BH goods due to modest levels of economic activity in the main trading partner countries. The annual growth of export value, in July, was recorded in commodity trading with Croatia (5.4%) and Slovenia (1.4%). On the other hand, a decline of export value was recorded in commodity exchange with Germany (10.7%), Serbia (4.2%), Italy (10.2%) and Austria (3.1%). Exports to the EU countries, the most important export market for BH, in the observed month, recorded annual decline of 0.9%, while the exports to CEFTA countries were lower by 6.0%.

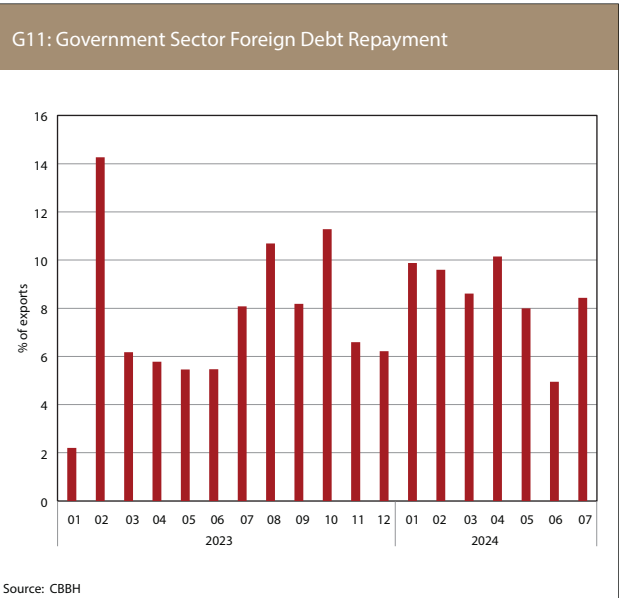

Following a decrease of the value of commodity exports in the previous two months at the annual level, a slow annual growth was recorded in July 2024. The value of exported goods in the observed month reached the amount of KM 1.39 billion, which represents an annual increase of 0.6%. Annual growth of the value of exported goods is a consequence of the growth of exports of the most significant product groups: chemical industry products (2.8%) and machines and appliances (5.9%). On the other hand, exports of mineral origin products (mainly electric energy), furniture and base metals recorded annual decline of 33.8%, 5.5% and 2.1%, respectively.

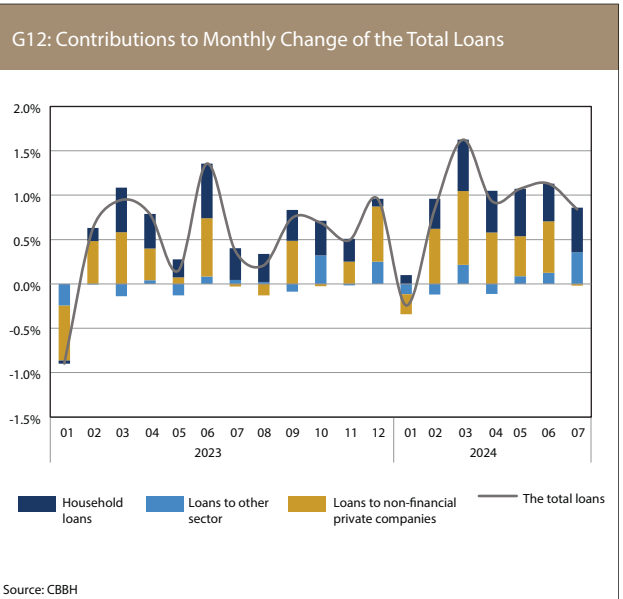

Following a decrease of the value of commodity imports in the previous month at the annual level, an annual growth was recorded in July 2024. In July, the value of imported goods reached the amount of KM 2.56 billion, which represents an annual growth of 8.4%. Annual growth of the value of commodity imports results from the growth of value of all the most significant import groups of products, so the following annual growth rates were recorded: Mineral origin products 13.8%, means of transport 7.4%, machines and appliances 5.4%, base metals 1.6% and food products 0.1%.

In July, a significant monthly growth of net collection of indirect tax revenues was seen (16.5%). The mentioned growth mainly reflected the recorded imports (imports to a high extent affect the growth of the collection of VAT and customs duties), but also due to a significant growth of income from tourism. In July, refunds were higher by 12.8% compared to the previous month. The monthly growth of net revenues came from all categories of indirect taxes. The strongest monthly growth of revenues was recorded for the main kind of tax, VAT (KM 51.5 million). In the seven months of this year, cumulative net revenues from indirect taxes amounted to KM 5.30 billion, which is a growth of KM 619.2 million (13.2%) at the annual level.

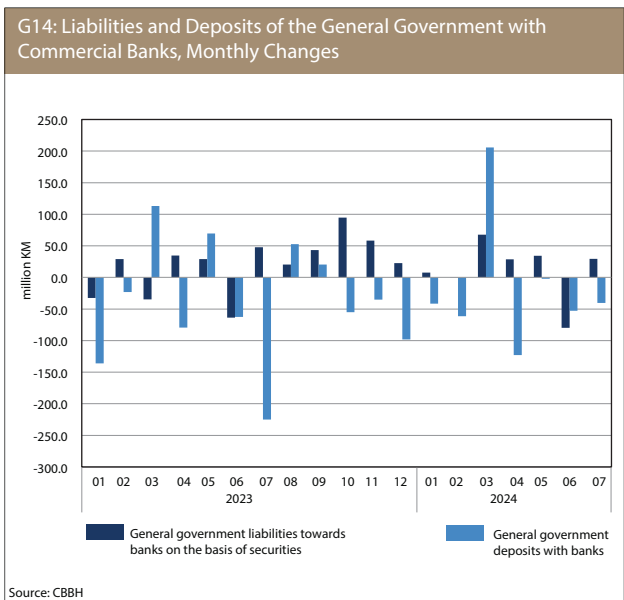

General government sector foreign debt is serviced from indirect tax revenues. Revenues on this basis record continuing stable collection, so government foreign debt repayment is stable in medium term. Foreign debt repayment, in per cents of exports, is within usual monthly oscillations, amounting to 8.4% of exports in July.

Despite the lending standards tightening and perception of higher risks by banks, high demand for loans still affects the maintaining of lending dynamics. Annual rate of the total credit growth in July (9.7%) is the highest in the previous 15 years. The basic feature of this reporting period is a significant contribution of household sector to credit growth while the loans to non-financial private companies did not record any significant monthly growth. The interest rates on loans of both households and non-financial companies slightly increased compared to the previous month.

Following the fifteen successive months of growth and a slight decrease in May, the total bank deposits continued to grow in July 2024. The key impact on the trend of the total deposits at the monthly level in July of 1.6% was that of deposits of the sector of non-financial private companies. Contribution of household sector compared to the previous period decreased (0.2pp), while the contribution of the sector of non-financial public companies was negative. The interest rates on deposits of both households and non-financial companies slightly increased compared to the previous month.

In July, monthly increase of liabilities of the general government with commercial banks amounted to KM 29.5 million. On the other hand, continuing decrease of the general government deposits was recorded in the previous four months. In the end of July, the total liabilities of the general government sector with commercial banks amounted to KM 3.50 billion, which is an annual growth of KM 328.1 million or 10.3%. The banking sector exposure to the general government sector in the end of July was 8.4% of the total banking sector assets.

After several month long stagnation, foreign liabilities significantly increased in June, while roughly the same level was kept in July 2024. The basic reasons of the foreign liabilities growth in June, in addition to the growth of non-residents' term deposits, was mainly the growth of other loans from non-residents. In July, foreign liabilities amounted to KM 1.84 billion, its growth taking place with very favourable maturity structure ensuring stability of this part of bank foreign exchange sub-balance. At July end, three quarters of foreign liabilities were related to non-residents' long-term funds (term deposits and loans). Following a decrease in the previous two months, and strong growth of foreign assets in July, net foreign assets at July end amounted to KM 4.8 billion. The structure of foreign assets in July did not change compared to June.

The net foreign exchange reserves at July end amounted to KM 16.43 billion, while at the annual level the foreign exchange reserves were higher by KM 868 million. At the monthly level, the foreign exchange reserves were lower by KM 122 million, mainly resulting from the recorded negative purchase and sale balance with internal depositors and commercial banks in the amount of KM 125 million. The public foreign debt repayment in July accounted for KM 118 million. Due to stronger decrease of monetary liabilities compared to decrease of the net foreign exchange reserves, the coverage ratio for currency board increased by 61 basis points at the monthly level, amounting to 107.33 % at July end.

The base for required reserve calculation, in the end of July amounted to KM 34.37 billion and it was higher than the balance in the same period of the previous year by KM 2.59 billion. In July 2024, monthly decrease of balances in reserve accounts with the CBBH amounted to roughly KM 40 million. According to the recorded trends in reserve calculation, and the growth of the base for required reserve calculation, the required reserve implicit rate decreased, reaching 16.62% at July end. Remuneration rate calculated in reserve accounts with the CBBH, and required reserve rate did not change in the observed period.

The reserve money decrease in July was significantly impacted by decrease of bank deposits with monetary authorities in the amount of around KM 360 million. In the same month, cash outside monetary authorities recorded monthly increase of KM 146 million. Compared to the same period of previous year, reserve money increased by KM 274 million. Due to continuing growth of transferable deposits in the local currency and slow decrease of other deposits, a monthly increase of monetary aggregate M2 in the amount of KM 421 million was recorded. The recorded trend of reserve money and the trend of monetary aggregates resulted in a lower monthly increase of monetary multipliers which remained at roughly the same level since the beginning of 2024.

Note: Brief notes on methodology can be found below each table, while more detailed ones are available at www.cbbh.ba

Notes applicable for tables 4, 5, 7, 8, 9, 10, 11, 12 i 13.

Since 01 July 2017, the status change of the merger of subsidiary company UniCredit Leasing d.o.o. Sarajevo to the company Unicredit Bank d.d. Mostar has taken place. Accordingly, Unicredit Leasing d.o.o. Sarajevo has stopped existing as of 30 June 2017 and the data on the merged company are presented within the report on UniCredit Bank d.d. Mostar, starting from the report for July 2017.

The revised data for the period January 2006 – November 2015 are based on the active sub-balance of the banks with majority state owned capital from the Federation of BH, with the passive sub-balance excluded. Through such supplement of statistics, the users are provided with higher analytical usefulness of data and objective indicators on the current operations of banks in BH. Passive sub-balance includes the liabilities based on foreign loans and old foreign exchange savings of citizens until 31 March 1992 and it does not reflect the current operations of the bank, so this sub-balance in the privatization process will be taken over by the Ministry of Finance of FBH according to the Law on Initial Balance Sheets of Banks and the Law on Privatization, as it has been done for the previously privatized banks. The performed revision mainly influenced the decrease of loans to public companies in a foreign currency, decrease of foreign liabilities, decrease of other items of assets and liabilities on the basis of old foreign exchange savings, and in considerably lower amounts, on items of loans to the Entity Government, fixed assets, non-residents' deposits, shares and capital.

The data on the „complete“ balance sheet, with the included passive sub-balance, are still available at: http://statistics.cbbh.ba:4444/Panorama/novaview/SimpleLogin_bs.aspx

In November 2014, two banks have realized the sale and transfer of part of the loan portfolio which resulted with increase in reserves with monetary authorities in the amount of 64 million KM and a decrease in the following items: claims of non-financial private enterprises 260 million KM, foreign liabilities 101 million KM and other items (net) 95 million KM.

Due to the application of International Accounting Standards (IAS) and the International Financial Reporting Standards applied in BH Federation banks and the transfer of money flows in December 2011 data, the following changes have occurred at the assets side: decrease of loans by KM 155 million, an increase in other assets by KM 10 million, at the liabilities side: decrease of liabilities to non-residents in the amount of KM624 million, an increase in loan loss provisions by KM 472 million and other liabilities increased by KM 7 million.

In February 2011, one bank from BH Federation reclassified deposits in the amount of around KM 80 million, from the deposits of public companies to the Entities' governments deposits, in line with the IMF recommendations.

By order of the FBH Banking Agency, in June 2010, one bank made a reclassification of about KM 300 million of claims based on securities on domestic institutional sectors to the claims on non-residents. In December 2010, the same bank made this reclassification, retroactively, in the respective amounts for the period from August 2009 when the error occurred, until May 2010. The above reclassification was reflected in the increase in foreign assets and decrease in other items net.

One bank from FBH made a reclassification of financial instruments in the foreign assets amounting to about KM 40 million for the period January - August 2010. Claims on non-residents based on loans were reclassified in claims on non-residents on the basis of securities, which resulted in changes in the short- term and long- term foreign assets.

By order of the Banking Agency of Republika Srpska one bank made a reclassification of financial instruments on the liabilities side, for the period of September 2008 - November 2010, .i.e.. the decrease in time and savings deposits of non-bank financial institutions and government sector, and the increase in loans from the same sectors, respectively, in the appropriate amounts, by months, ranging from 50 - 150 million KM.

In accordance with new regulations of the RS Banking Agency, published in the Official Gazette of RS, no.136/10, which has regulated a new manner of recording receivables classified in category "E", accounting and bookkeeping of interest on non-performing assets and calculation of general and special provisions, RS banks, in the data for December 2010, implemented the mentioned regulations, by transferring these items from off-balance records into balance sheet. The correction was reflected on the assets side, as increase of loans in the amount of about KM 144 million, and increase of due interest in the amount of KM 36 million, and on the liabilities side, as increase in provisions for loan losses amounting to about KM 180 million within the capital account.

Notes:

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

Gross foreign reserves consist of balance sheet positions of short-term foreign assets of the CBBH (gold, CBBH SDR holdings, foreign exchange in the CBBH vault, transferable deposits in foreign currency with non-resident banks and other) and investment in securities according to the CBBH Investment Committee Decision from July 2006. Net foreign reserves represent a difference between gross foreign reserves and liabilities to non-residents. Monetary liabilities of the CBBH include money outside monetary authorities and deposits of residents with monetary authorities. Net foreign assets of CBBH represent a difference between net foreign exchange reserves and monetary liabilities of the CBBH.

Notes:

Since January 2019, the currency structure of financial instruments (loans, deposits, securities) presented originally in KM and indexed in foreign currency has been reclassified from local currency positions to foreign currency positions in monetary statistics reports.

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

The currency outside monetary authorities is taken from the CBBH Balance Sheet and it consists of cash outside the central bank (monetary authorities). Deposits of commercial banks are commercial banks' funds in accounts at the CBBH. Transferable deposits of other domestic sectors with monetary authorities are deposits of other domestic sectors (except central government deposits). The central government consists of BH Institutions, Entity governments, Entity Social Security Funds and those of Brčko District. Social security funds on Entity level (from Federation of BH: Pension Fund, Health Care Fund of FBH, Employment Fund of FBH, and from Republika Srpska: Pension and Disability Insurance Fund of RS, Health Care Fund of RS, Employment Fund of RS and Fund for Child Protection of RS) are classified on the central government level.

Cash outside banks is taken over from the CBBH Balance Sheet (Table 6) and represents cash in circulation outside the central bank (monetary authorities) and cash outside commercial banks. Transferable deposits in the domestic currency are taken from the Monetary Survey (Table 5). They consist of deposits of non-central government (cantons and municipalities), deposits of public and private companies, other financial institutions and deposits of other domestic sectors (households, non-profit institutions and other unclassified sectors). Other deposits in the domestic currency, transferable and other deposits in foreign currency are taken over from the Monetary Survey (Table 5). They consist of deposits of non-central government (cantons and municipalities), deposits of public and private companies, other financial institutions and deposits of other domestic sectors (households, non-profit institutions and other unclassified sectors).

Reserve money (primary money or monetary base) is entirely taken from the CBBH Balance Sheet (Table 6). It consists of cash outside monetary authorities, deposits of commercial banks and deposits of other domestic sectors (except for deposits of the central government) with monetary authorities. According to national definition, money supply comprises all transferable and other deposits of domestic nonbank and nongovernment sectors, as well deposits of local government in domestic and foreign currency. Deposits of entity Social Security Funds are included into the central government on Entity level and by that they are excluded from money supply or monetary aggregates. Monetary aggregate M1 comprises cash outside banks and transferable deposits in domestic currency of all domestic sectors (except for deposits of the central government). Monetary aggregate QM is defined in the same way as the corresponding item in the Monetary Survey (Table 5). It consists of other deposits in domestic currency, transferable and other deposits in a foreign currency of all domestic sectors (except for deposits of the central government). Money supply M2 comprises monetary aggregates, M1 and QM.

Notes:

Since January 2019, the currency structure of financial instruments (loans, deposits, securities) presented originally in KM and indexed in foreign currency has been reclassified from local currency positions to foreign currency positions in monetary statistics reports.

Monetary data updated according to the MMF methodology (Monetary and Financial Statistics Manual, 2000), from January 2006

The Monetary Survey presents the consolidated data from the Balance Sheet of CBBH - monetary authorities (Table 6) and the Consolidated Balance Sheet of Commercial Banks of Bosnia and Herzegovina (Table 7). Foreign assets (net) represent the difference between total foreign assets of the CBBH - monetary authorities and commercial banks of BH and total foreign liabilities of the CBBH - monetary authorities and commercial banks of BH. Domestic loans represent commercial banks' claims on all domestic sectors, but it should be noted that claims on central government are presented in net amounts, i.e. they are reduced by the deposits of central government with the CBBH and with BH commercial banks. The central government consists of BH Institutions, Entity governments, Entity Social Security Funds and those of Brčko District. According to new methodology, Social Security Funds are classified on the central government level as Entities' off-budget funds, which has a direct impact on the data about net claims on the central government in Monetary Survey.

Notes:

Since January 2019, the currency structure of financial instruments (loans, deposits, securities) presented originally in KM and indexed in foreign currency has been reclassified from local currency positions to foreign currency positions in monetary statistics reports.

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

Money M1 comprises currency outside banks, transferable deposits in the domestic currency of all domestic sectors (except for deposits of central government). Quasi money QM comprises other deposits in the domestic currency, transferable and other deposits in foreign currency of all domestic sectors (except for deposits of the central government). Money supply M2 comprises monetary aggregates, money M1 and quasi money QM. Other liabilities include securities, loans, shares and other equity and other items (net). According to a new methodology, loans are presented as separate financial instruments on the side of liabilities (with which the calculated interest is added), and also shares and other equity. Other items (net) are unallocated items of liabilities reduced by the unallocated items of assets. Other items (net) also comprise restricted deposits, counter-items of funds and government lending funds.

Note:

Monetary data updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000), from January 2006.

The CBBH (monetary authorities) foreign assets comprise gold, foreign currency in the CBBH vault, foreign currency deposits with foreign banks, SDR holdings, foreign securities and other. Claims on domestic sectors consist of claims on employees of the CBBH for the extended long-term loans and claims on commercial banks on the basis of settlement accounts.

Reserve money (primary money or monetary base) is comprised of cash outside monetary authorities, deposits of commercial banks and deposits of other domestic sectors (except for the central government) with monetary authorities. Cash outside banks represents cash in circulation outside the Central Bank (monetary authorities) and cash outside commercial banks.

The CBBH foreign liabilities are comprised of short-term liabilities towards non-residents, deposits of non-residents and other short-term liabilities towards non-residents and liabilities towards the IMF (Accounts 1 and 2).

Deposits of central government with the CBBH are transferable and other deposits of BH Institutions, Entity Governments, Entity Social Security Funds and those of Brčko District in the local currency. Shares and other equity comprise the equity, current year result, general and special reserves and adjustment/revaluation. Other items (net) are unallocated items of liabilities reduced by the unallocated items of assets.

Note:

Since January 2019, the currency structure of financial instruments (loans, deposits, securities) presented originally in KM and indexed in foreign currency has been reclassified from local currency positions to foreign currency positions in monetary statistics reports.

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

Consolidated balance sheet of commercial banks includes consolidated balance sheets of commercial banks covered by Main Unit Sarajevo, Main Unit Mostar and Main Bank of Republika Srpska CBBH and it represents consolidation of mutual claims and liabilities among the commercial banks. Banks' reserves consist of cash in the banks' vaults and banks' deposits with the Central Bank of Bosnia and Herzegovina. Foreign assets of commercial banks include: foreign currency in the vaults, transferable and other deposits with non-residents in foreign currency, loans to non-residents, securities of non-residents in foreign currency, and other claims on non-residents.

Claims on general government include claims on all levels of government: the central government (BH Institutions, Entity governments, Entity social security funds and Brčko District) and non-central governments (canton and municipality governments). Claims on other domestic sectors include claims on public non-financial enterprises, private non-financial enterprises, other financial institutions and claims on other domestic sectors (households, non-profit institutions and other unclassified sectors).

Notes:

Since January 2019, the currency structure of financial instruments (loans, deposits, securities) presented originally in KM and indexed in foreign currency has been reclassified from local currency positions to foreign currency positions in monetary statistics reports.

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

Central government deposits include transferable and other deposits in domestic and foreign currency of BH Institutions, Entity governments, Entity social security funds and those of Brčko District. Transferable and other deposits of other domestic sectors in domestic and foreign currency represent banks liabilities towards non-central government (canton and municipality governments), public non-financial enterprises, private non-financial enterprises, other financial institutions and other domestic sectors (households, non-profit institutions and other unclassified sectors). Foreign liabilities of commercial banks include banks liabilities to non-residents based on transferable and other deposits, loans, securities, trade loans and advance payments and other accounts payable. According to a new methodology, loans are presented as a separate financial instrument on the side of liabilities, with which the calculated interest is added.

Shares and other equity include equity, retained earnings, current year result, general and special reserves and adjustment /revaluation. Other items (net) are unallocated items of liabilities reduced by the unallocated items of assets. Restricted deposits are also included in other items (net).

Notes:

Revised data for May 2024.

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

Total deposits represent liabilities of commercial banks of BH towards all domestic institutional sectors in domestic and foreign currency.

Total loans represent claims of commercial banks of BH on all institutional sectors, in domestic and foreign currency.

Notes:

Revised data for May 2024.

Since January 2019, the currency structure of financial instruments (loans, deposits, securities) presented originally in KM and indexed in foreign currency has been reclassified from local currency positions to foreign currency positions in monetary statistics reports.

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

By order of FBA in March 2010, loans to households with currency clause with one bank were reclassified, from loans in EUR to loans in KM.

Notes:

Revised data for May 2024.

Monetary data have been updated according to the IMF methodology (Monetary and Financial Statistics Manual, 2000) from January 2006.

Loans to domestic institutional sectors represent claims of commercial banks on all institutional sectors. Loans at the BH level include loans extended by commercial banks covered by Main Unit Sarajevo, Main Unit Mostar and Main Bank of Republika Srpska CBBH Banja Luka.

	07	34,366,614	3,436,661	5,710,881	2,274,219

Notes:

From July 1st, 2016, the required reserves rate applied by the CBBH to the base for calculation of required reserves is 10%. From 1 July 2016, the CBBH applies the new rates for the calculation of fees to the funds in the banks' reserves accounts : in the accounting period, the Central Bank does not charge a fee on the amount of required reserves in commercial banks' reserves accounts, and on the amount of excess reserves, the CBBH charges the fee at the rate equal to 50% of the rate applied to commercial banks' deposits (deposit facility rate) by the European Central Bank. Since May 1st, 2015, the Central Bank has calculated the compensation for a bank on the amount of the bank's funds in the reserve account with the Central Bank in the calculation period, as it follows:

-on the reserve requirement amount – the average of EONIA recorded in the same period on the market reduced by 10 basis points, or minimum zero, -on the amount of the funds exceeding the reserve requirement – zero rate of compensation.

The zero rate of compensation on the reserve requirement is applied in case the average EONIA decreased by 10 basis points has a negative value. From September 1st, 2014, the remuneration rate has been calculated on the basis of the weighted average interest rate which was earned by the Central Bank of BH on the market in the same period on deposits invested up to a month ; and 70% is calculated on the amount of required reserve or minimum 0, while 90% of the mentioned rate is calculated on the amount of excess reserves or minimum 0.

From February 1st, 2011 the required reserves rate on deposits and borrowed assets with contracted term of maturity up to one year was declined from 14% to 10%,while the required reserves rate on deposits and borrowed assets with contracted term of maturity over one year is not changed. From August 1st 2011. the remuneration rate is calculated by the weighted average interest rate which were earned by the Central Bank on deposits invested up to a month in the same period; 70% of this rate is calculated on the amount of required reserves while 90% of the same rate is calculated on the amount of excess reserves.

From July 1st, 2010 remuneration rate on the amount of required reserves is changed and calculated as an average of interest rates, which were earned by the Central bank on overnight deposits in the same period,while remuneration rate on the amount of excess reserves is not changed. From January 1st, 2009 the required reserves rate is 14% on deposits and borrowed assets with contracted term of maturity up to one year and 10% on deposits and borrowed assets with contracted term of maturity over one year.From April 1st, 2009 remuneration rate is calculated as:- On the amount of required reserves is 0,5%,- On the amount of excess reserves on the rate calculated as an average of interest rates, which were earned by the Central bank on deposits invested up to a month. From May 1st, 2009 the required reserves rate is 7% on deposits and borrowed assets with contracted term of maturity over one year.

From January 1st, 2008 required reserves rate was increased from 15% to 18%.

From October 11th, 2008 required reserves rate was declined from 18% to 14%.

*The base for calculation of required reserves includes deposits and borrowed funds in domestic (in KM and KM with the currency clause) and other currency expressed in KM.

Note:

International investment position (IIP) for BH is compiled in accordance with the latest International Monetary Fund Methodology for compilation of Balance of payments (BOP) and International investment position statistics, sixth edition (BPM6). Compilation of the International investment position for the fourth quarter includes the regular revision of previously published data for current year in accordance with most recent available source data. Shortened versions of the applied methodological approach for the compilation of BH IIP statistics are available on the CBBH website.

Notes:

Criteria for presenting country is the share of export of the country in total three-year BH export (2016, 2017, 2018).

Thus, all countries with share higher than 3,0% are separately presented, while the other countries are presented as sum in the column Other countries.

Notes:

Criteria for presenting country is the share of import of the country in total three-year BH import (2016, 2017, 2018).

Thus, all countries with share higher than 3,0% are separately presented, while the other countries are presented as sum in the column Other countries.

T23: Average Middle Exchange Rates of KM
